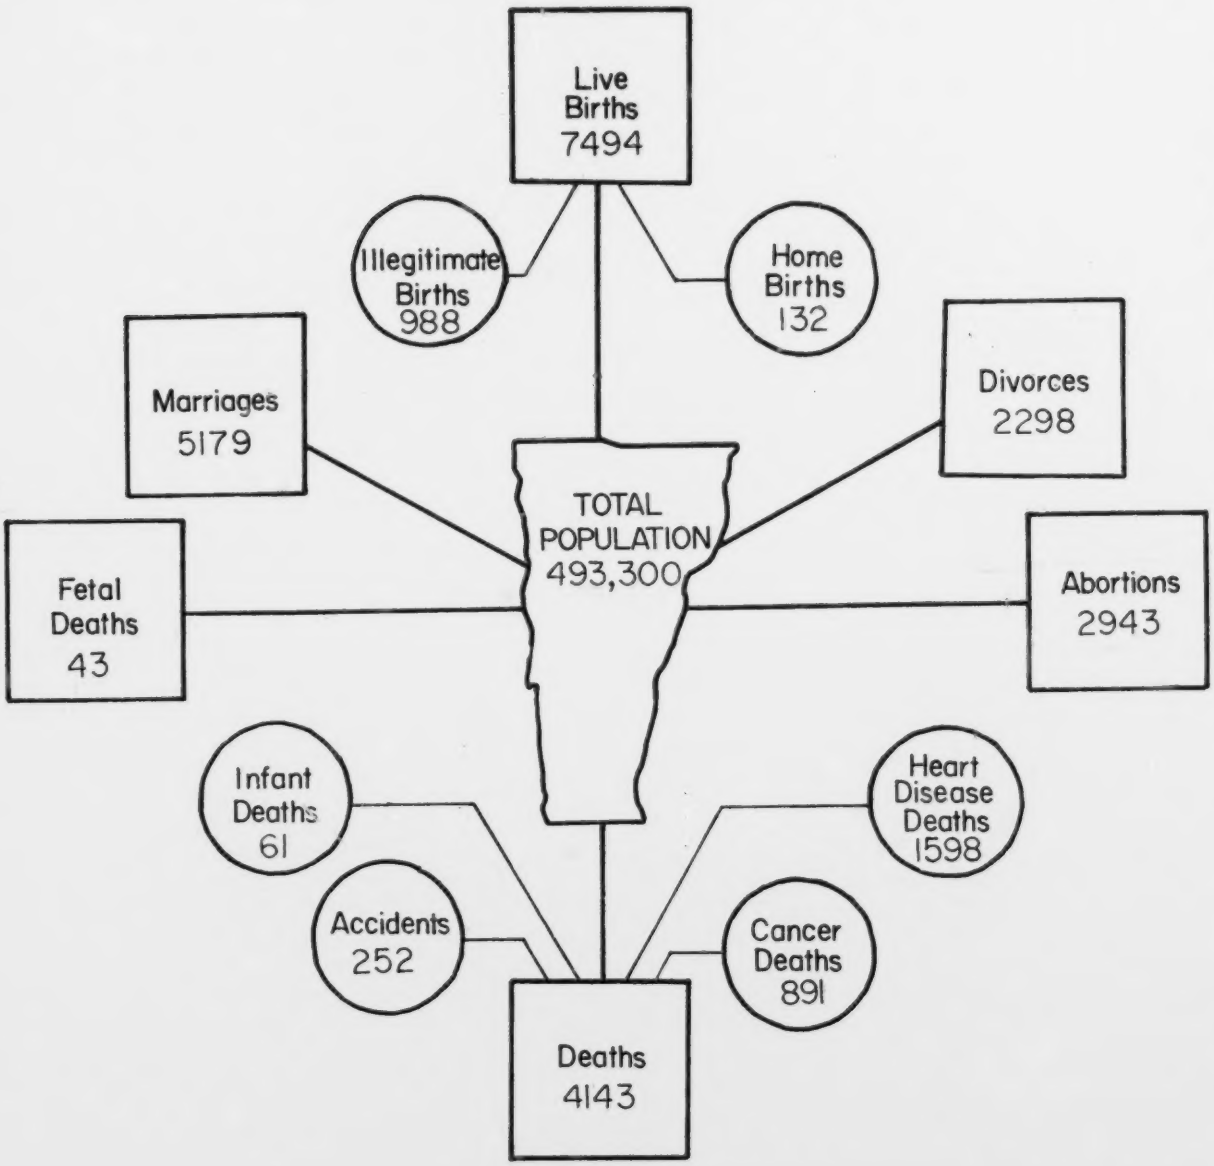
VERMONT VITAL EVENTS FOR 1979



Marriages, divorces and abortions are displayed above as occurrence data; all other vital events represent resident data.

INTRODUCTION

Title 18, section 5002 of the Vermont Statutes Annotated requires periodic publication of tables from the returns of births, deaths, fetal deaths, marriages and divorces. This report, which is the ninety-fifth in a series of publications begun in 1857, presents Vermont vital events for the year 1979.

THE VERMONT VITAL STATISTICS SYSTEM

Figure 2A presents an overview of the vital statistics system in Vermont. Births and deaths are filed with the clerk in the town of occurrence on certificates designed and distributed by the Health Department's Division of Public Health Statistics. Marriages are filed with the clerk issuing the license (the town of residence of either the bride or groom or if neither are Vermont residents, a town clerk in the county where the marriage takes place). Divorces are filed with the county clerk in the county where the decree is granted. Copies of these certificates are sent monthly to the Health Department for statistical processing and permanent filing.

Reports of fetal death and induced termination of pregnancy are not legal documents in Vermont. These records are filled out by the attendant at the event and are sent directly to the Health Department. After processing, the reports are temporarily filed and are periodically destroyed.

Copies of certificates pertaining to events which occurred to Vermonters outside the state are sent to the Health Department by the state in which the event occurred under the interstate exchange program for vital records. This program includes events affecting armed forces personnel stationed overseas. The Health Department is not typically informed of events occurring to the civilian population while out of the territorial United States and Canada.

Figure 2B charts the process within the Department of Health. Upon receipt at the Health Department, the certificates are logged in by town, visually edited for completeness and internal consistencies and queried back to the source if omissions or inconsistencies are found. Since, under Vermont law, a certificate cannot be amended in the Health Department, if necessary, the appropriate person will be asked to file an amended certificate. Medical and demographic data is coded and the certificate is numbered and microfilmed. Infant deaths are matched with the corresponding birth certificate. Certificates are then passed from the vital records section to data processing.

figure 2

THE VERMONT VITAL STATISTICS SYSTEM

A. OVERVIEW

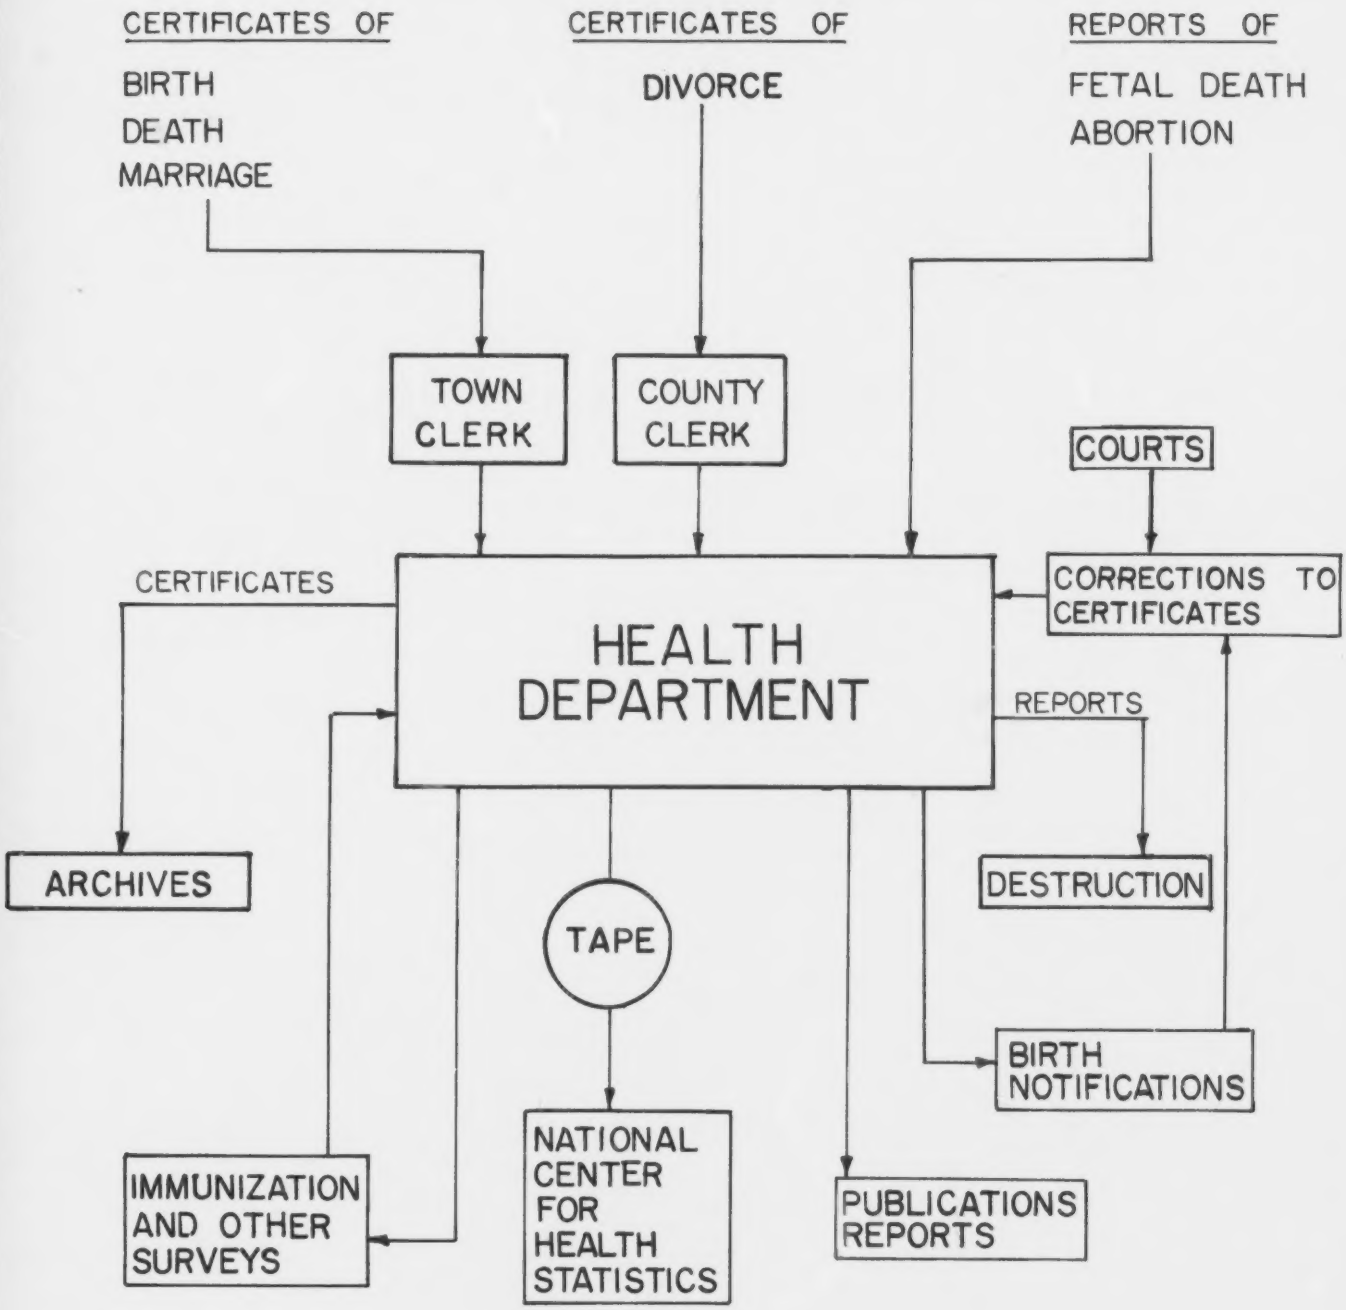


figure 2

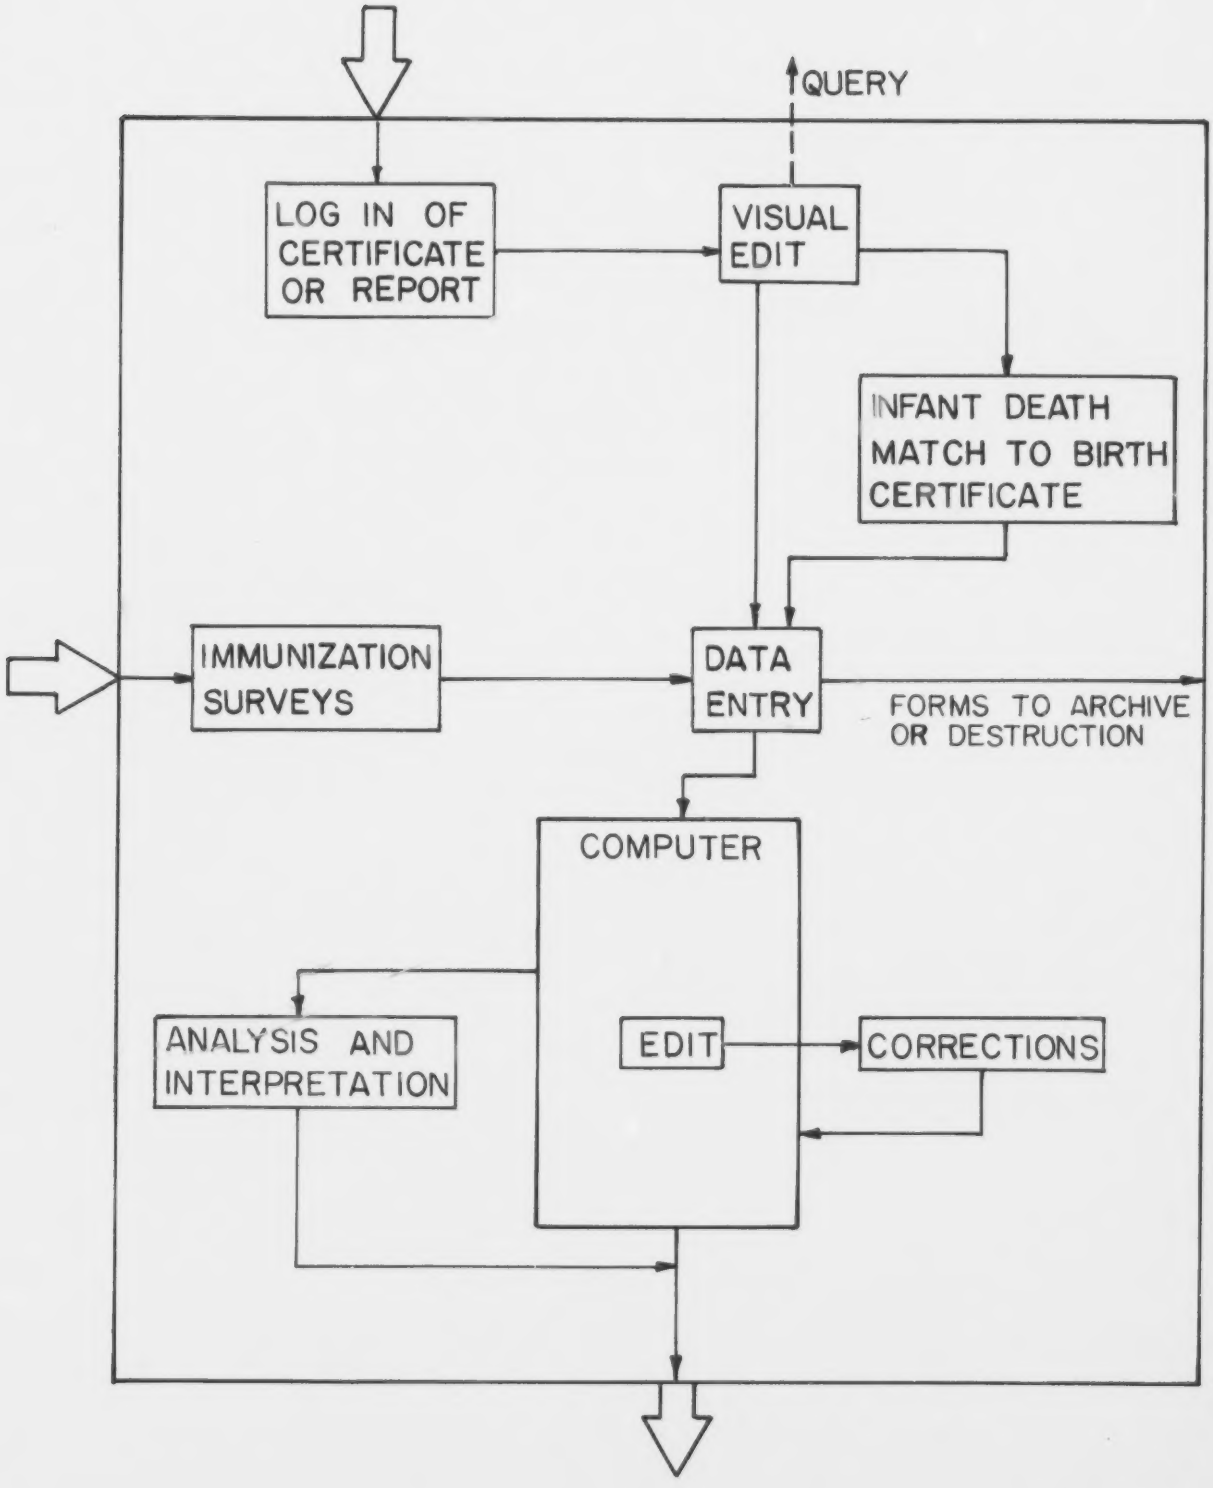
B. HEALTH DEPARTMENT COMPONENT



After the certificates are keyed and verified, the month's vital events, including the matched births and deaths as well as the results of the Health Department's 8 and 20 month immunization status surveys, are loaded into the computer. The records are then subjected to a computerized edit which checks all fields for valid codes and inconsistencies as well as flagging suspiciously large or small values and certain improbable conditions, such as unusual age-sex-cause of death combinations. Any discrepancies are reconciled and the records are added to the master tape. A copy of the months records is transmitted to the National Center for Health Statistics' national health data base. Monthly lists of vital events and immunization status reports are produced. When the annual data is complete, usually June of the following year, annual tabulations, including the one found in this bulletin are produced.

POPULATION

All rates in this publication are based on estimates of the Vermont mid-year 1979 population (Table 2). The county total estimates were developed by the Division of Public Health Statistics in cooperation with the Bureau of the Census as part of the Federal-State Cooperative Population Estimation Program (FSCP-E). The age-sex distribution was developed by advancing the 1978 estimates, controlling to the FSCP-E county totals and to sub-totals developed from 1979 birth, school enrollment and Medicare enrollee data. The resulting age-sex estimates differ from the FSCP-E county totals by no more than 0.9 percent.

Basic Definitions

The following definitions apply throughout this report:

A live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

A reportable fetal death is a death prior to the complete expulsion or extraction from its mother of a product of conception, having passed through at least the 20th week of gestation or weighing more than 400 grams; the fetus shows no signs of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

An abortion is an induced termination of pregnancy prior to the 20th week of gestation.

Weeks of gestation is the number of weeks elapsed between the first day of the last menstrual period and the date of delivery.

A neonatal death is a death occurring in the first 28 days of life.

An infant death is a death occurring in the first year of life.

A perinatal death is a fetal death or a death occurring in the first week of life.

Live birth order is the number of previous live births plus the current birth.

Plurality is the number of siblings born as a result of this pregnancy.

Residence. Usual place of residence for person to whom event occurred. For births and fetal deaths residence is defined as the mother's usual place of residence.

Occurrence. Place where the event actually occurred.

RATES

Crude Birth Rate = $\frac{\text{No. of resident live births}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Fertility Rate = $\frac{\text{No. of resident live births}}{\text{Total resident female population (15-44)}} \times 1{,}00$

Age-specific Fertility Rate = $\frac{\text{No. of resident live births for a specific age of mother}}{\text{Total female population of specific age (mid-year)}} \times 1{,}000$

Crude Death Rate = $\frac{\text{No. of resident deaths}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Age-specific Death Rate = $\frac{\text{No. of deaths in specific age group}}{\text{Total resident population in specific age group}} \times 100{,}00$

Marriage Rate = $\frac{\text{No. of persons married}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Divorce Rate = $\frac{\text{No. of persons (divorces \& annulments)}}{\text{Total resident population (mid-year)}} \times 1{,}000$

Infant Death Rate = $\frac{\text{No. of infant deaths}}{\text{Total resident live births}} \times 1{,}000$

Neonatal Death Rate = $\frac{\text{No. of neonatal deaths}}{\text{Total resident live births}} \times 1{,}000$

Fetal Death Rate = $\frac{\text{No. or resident fetal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1{,}000$

Perinatal Death Rate = $\frac{\text{No. of perinatal deaths}}{\text{Total resident live births and resident fetal deaths}} \times 1{,}000$

Abortion Ratio = $\frac{\text{No. of resident abortions}}{\text{Total resident live births}} \times 1{,}000$

Age adjusted rates:

Age adjusting allows one to compare rates among populations having different age distributions by adjusting the crude rates in each population to a standard population base. (In this bulletin, county rates are adjusted to the state population distribution.) The computation formula is:

$$\text{The sum of } \left(\frac{\text{Age specific rate for each age group} \times \text{standard population in that age group}}{\text{Total standard population}} \right) \times 1{,}000$$

SUMMARY STATISTICS

Summary of 1979 Vital Events

	Occurrence Number	Residence Number	Rate	
Births	7,295	7,494	15.2/1000	Population
Deaths	4,304	4,143	8.4/1000	Population
Natural Increase		3,351	6.8/1000	Population
Infant Deaths	52	61	8.1/1000	Live Births
Fetal Deaths	49	43	5.7/1000	Live Births and Fetal Deaths
Abortions	2,943	2,285*	304.9/1000	Live Births
Marriages	5,179		10.5/1000	Population**
Divorces	2,298		4.7/1000	Population**

Estimated mid-year population: 493,300

*Does not include out of state occurrences.

**Based on number of occurrences.

SUMMARY STATISTICS

The 1979 birth rate of 15.2 live births per 1,000 population represents a 5 percent increase from the previous year. The Vermont birth rate declined from relatively high rates of 24 per 1,000 population in the 1950's to a recent low of 14.1 per 1,000 in 1976. The 1978-1979 increment in the birth rate is the largest annual increase in recent years.

The 1979 crude death rate of 8.4 per 1,000 population is the lowest rate ever reported in Vermont. The Vermont crude death rate has been declining gradually over the past thirty years.

The fetal, perinatal, neonatal and infant death rates declined from 1978 levels. Each rate attained the lowest level on record in Vermont, although the fetal mortality rate was barely lower than the 1978 rate. A noteworthy decline was observed in the neonatal death rate which decreased from 8.8 to 5.9 deaths per 1,000 live births. The infant death rate decreased 39 percent from the 1978 rate.

The 2,285 abortions performed on Vermont women in 1979 was the greatest number performed to date. The abortion ratio increased over time after the procedure was legalized and reporting became mandatory in 1972. The 1979 ratio of 304.9 abortions per 1,000 live births represents a nearly seven percent increase over the 1978 ratio.

The marriage rate of 10.5 per 1,000 population increased slightly over the 1978 rate of 9.9. The divorce rate continued its long term increase, reaching the highest value on record in Vermont. The 1979 rate of 4.7 divorces per 1,000 population was 12 percent higher than the previous year, and was more than twice the Vermont divorce rates of the 1950's.

[1]Rate per 1,000 population

[2]Rate per 1,000 live births

[3]Rate per 1,000 live births and fetal deaths

[4]Rate per 10,000 live births

*The majority laws were changed, effective July 1, 1971, so that all 18 year old residents could marry without parental consent.

#Reporting requirements were changed and includes only those of 20^{+} weeks gestation.

**Data for these years is based on occurrence returns only. 1857 was the first year that town clerks were required to report vital events to the Secretary of State and returns for that year are incomplete.

BIRTHS

Vermont women gave birth to 7,494 children in 1979, 430 more than in the previous year. The crude birthrate of 15.2 live births per 1,000 population was also higher than in 1978 (Figure 4). The birthrate is expected to continue increasing for a number of years as the children of the post World War II baby boom become parents.

The mean age of all Vermont mothers was 25.5 years, a value similar to those of recent years. The mean age of mothers of legitimate children was 26.2 years, significantly older than the 21.3 year mean age of mothers of illegitimate children. Eighty-one percent of all Vermont mothers were high school graduates, and 18 percent completed four or more years of college. The number of prenatal visits varied substantially by county: 92 percent of the women in Chittenden County reported nine or more prenatal visits, whereas only 52-54 percent of expectant mothers in Franklin, Orleans and Rutland Counties reported that many visits. Overall, 73 percent of Vermont women had nine or more prenatal visits.

Prenatal care began during the second month for half of all expectant mothers. The month in which care began did not vary appreciably among counties, but was significantly correlated with age of mother. On the average, mothers younger than seventeen years of age began prenatal care late in the third month; as the mother's age increased, the first prenatal visit occurred earlier ($r = -.72$, $p<.05$). In addition, the month prenatal care began decreased as the education of the mother improved. Women with less than four years of high school typically began prenatal care in the middle of the third month whereas the mean for college graduates was one month earlier. Factors such as doctor's recommendations and adequacy of health insurance complement education and age of mother as important variables.

Slightly more than half of all children born in 1979 were male (51.6%). The 3,865 male and 3,629 female children born differ significantly from a one to one sex ratio, which is characteristic of most human populations.

The number of births varied significantly by month, with the greatest number of births occurring from May through August.

The mean weight of all babies born in 1979 was 3,368 grams, approximately seven and one half pounds. Male babies tended to be slightly heavier (3,426 grams) than females (3,306 grams). Four hundred fifty-four babies (6.2%) weighed less than 2,500 grams at birth. The percent of these low birthweight infants born varied with the age of the mother. Very young and very old mothers gave birth to a higher frequency of low birthweight babies than did mothers in their twenties and early thirties (Figure 5).

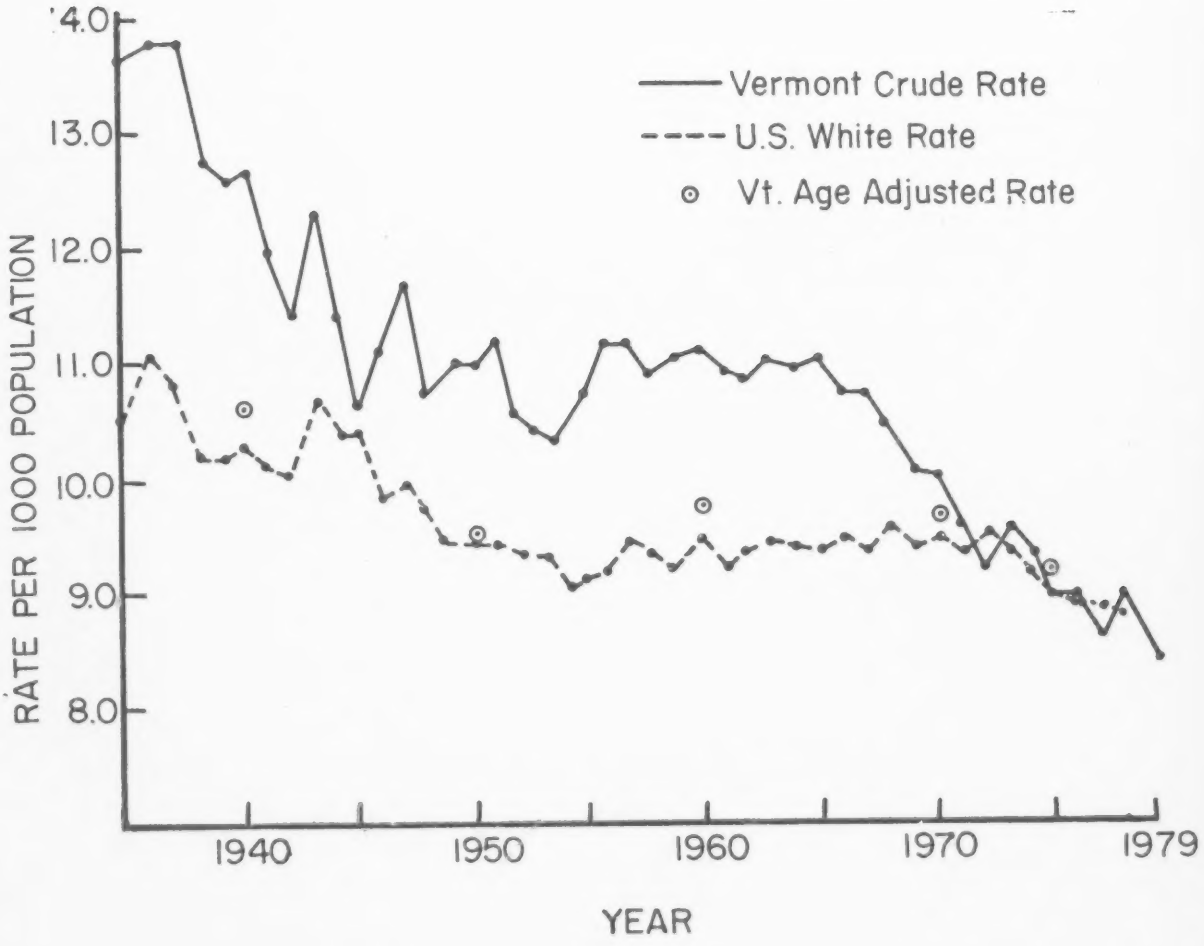
DEATHS

figure 6

Vermont and U.S. White Crude Death Rates 1935-1979



United States data for 1979 not available at time of publication.

DEATHS

The 1979 Vermont crude death rate of 8.4 per 1,000 population is the lowest on record (Figure 6). Fifty-four percent of mortalities were males, whose average age at death was 65.5 years, in contrast to an average of 72.6 years for females.

The leading causes of death in 1979 were different from those at the turn of the century (Figure 7). Infant deaths and tuberculosis have become relatively uncommon causes of death in 1979, whereas heart disease and cancer have increased in relative frequency. However, the proportion of mortalities due to each of the ten leading causes of death in 1979 was virtually identical to 1978. Diseases of the heart and malignant neoplasms were the principal causes of death, and were responsible for 60 percent of all 1979 deaths. Half of the deaths due to malignant neoplasms were cancer of the digestive organs and peritoneum and cancer of the respiratory system. Ischemic heart disease was responsible for 69 percent of all heart disease deaths. Male mortality rates were higher than female mortality rates for seven of the ten leading causes, with accidents, chronic obstructive lung disease and suicide showing mortality rates for males more than twice as great as for females.

The principal causes of death varied with age at death. Motor vehicle accidents were responsible for 34 percent of all deaths occurring to individuals younger than 24 years, but represented only 2 percent of deaths of persons older than 24 years.

Malignant neoplasms were the most common cause of death in the 25-44 age category, representing 18 percent of deaths. Diseases of the heart were responsible for 12 percent of the deaths of 25-44 year old persons. In the 45-64 age category, the proportion of deaths due to cancer (33%) and heart disease (35%) were similar. Persons aged 65-75 years died of heart disease much more frequently (41%) than cancer (27%). Forty-five percent of residents aged 75 years or older died of heart disease, a substantially higher percentage than those dying of cancer (16%) and cerebrovascular disease (11%).

*Cause of death is coded by the International Classification of Diseases, Adapted (ICDA). Deaths in 1952-57 were coded according to the 6th ICDA revision (ICDA-6), 1958-67 deaths according to ICDA-7, 1968-78 deaths according to ICDA-8, and 1979 deaths according to ICD-9. Although there is little difference between ICDA-6 and ICDA-7, significant changes were made in ICDA-8 and ICD-9. Therefore, code numbers for ICDA-7, ICDA-8 and ICD-9 are given in addition to comparability ratios which have been applied to earlier rates to make them comparable to the 1979 rates. (Ratios from "Monthly Vital Statistics Report", Volumn 17, #8 Supplement, October 25, 1968, and Volume 28, #11 Supplement, February 29, 1980; DHEW, NCHS, Washington, D.C.).

PLACE CODES:

1. HOME: INCLUDING HOME PREMISES AND ANY NON-INSTITUTIONAL PLACE OF RESIDENCE AND EXCLUDING TEMPORARY RECREATIONAL SHELTERS, SUCH AS TRAVEL TRAILERS, TENTS, HUNTING CABINS.
2. FARM: INCLUDING BUILDINGS AND LAND UNDER CULTIVATION BUT EXCLUDING THE FARM HOUSE.
3. MINE AND QUARRY: INCLUDING GRAVEL, SAND PITS & ABANDONED MINES.
4. INDUSTRIAL: INCLUDES MANUFACTURING, CONSTRUCTION AND OTHER PLACES OF AN INDUSTRIAL NATURE.
5. PLACE OF RECREATION
6. AIRCRAFT AND SPACE.
7. STREET, HIGHWAY, SIDEWALKS: EXCLUDING ACCIDENTS ON HOME PREMISES SIDEWALKS.
8. PUBLIC BUILDINGS: INCLUDES INJURY TO PEOPLE OTHER THAN THOSE INVOLVED IN CONSTRUCTION WORK.
9. RESIDENT INSTITUTIONS.
10. LOGGING SITE: WOOD LOT.
11. FIELD, FOREST: EXCLUDING PART OF FARM OR RECREATION SITE.
14. LAKE, RIVER OR STREAM: WHEN NOT A RECREATION SITE.
15. OTHER SPECIFIED PLACES.

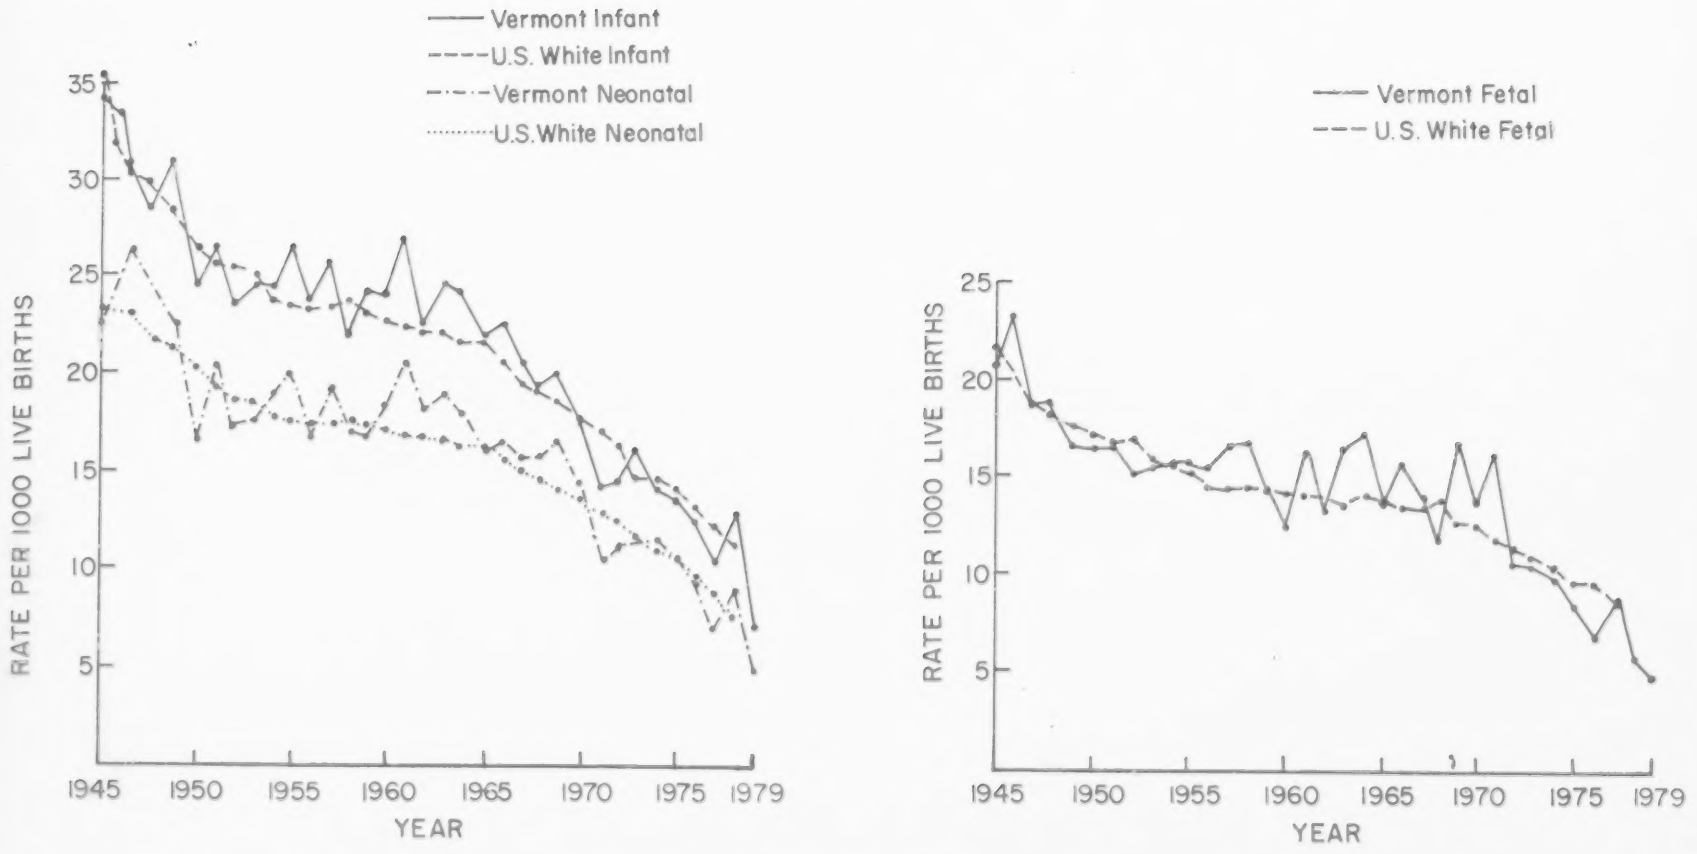
Vermont and U.S. White Infant and Neonatal Mortality Rates and Fetal Mortality Ratios 1945-1979



United States data for 1979 not available at time of publication.
United States fetal death data for 1978 not available at time of publication.

INFANT DEATHS, FETAL DEATHS AND ABORTIONS

In 1979, fetal, perinatal, neonatal and infant mortality rates each reached the lowest level ever recorded in Vermont (Figure 8). There were 43 fetal deaths (5.7 per 1,000 live births plus fetal deaths), barely lower than the 1978 rate of 5.8. Perinatal mortality rates decreased nearly 8 percent, from 11.7 to 10.8 per 1,000 live births. Neonatal mortality declined substantially. Only 44 children died in their first 28 days of life in 1979 (5.9 per 1,000 live births), whereas 62 children died in the neonatal period in 1978. The infant mortality rate dropped 39 percent from 1978 to 1979. The Vermont infant mortality rate of 8.1 per 1,000 live births was the lowest rate in the United States in 1979.

The Vermont infant mortality rate has decreased dramatically from rates of 119.2 per 1,000 live births at the beginning of the 20th century. Better maternal and child nutrition, better medical care and improvements in the overall standard of living contributed to the declining infant death rates. In addition to long term declines, the Vermont infant mortality rate has declined notably over the past ten years.

Mortality rates for infants in the early neonatal period (through the first six days of life) declined significantly over the past ten years. The mortality rate for infants older than seven days fluctuated from year to year, but did not show any significant tendency to decrease over time. Principal causes of death for infants dying prior to their seventh day of life include congenital anomalies, asphyxia, birth injuries to the brain, immaturity and respiratory distress syndrome. These causes accounted for 66 percent of first week deaths recorded from 1974-1979. Infant mortality rates due to asphyxia, immaturity and respiratory distress syndrome decreased significantly over the past eleven years, whereas deaths due to congenital anomalies and injuries to the brain showed no significant trends. Asphyxia, immaturity and respiratory distress syndrome are primarily causes of death in low birthweight babies.

The Vermont infant mortality rate has decreased in recent years largely because of two phenomena: a decrease in the proportion of low birthweight babies, and improved survivorship of low birthweight babies. The precise causes for these trends are difficult to establish, but certainly improved medical care of expectant mothers and newborn infants played an important role.

The 2,943 abortions performed in Vermont in 1979 is the greatest number on record (Figure 9). Over three-fourths (78%) of these abortions were performed on Vermont residents. The mean age of all women obtaining an abortion was 22.8 years; 33 percent were younger than 20 years of age. Seventy-two percent were unmarried and 75 percent had no children. Eighty-three percent completed high school and 13 percent had attended four or more years of college.

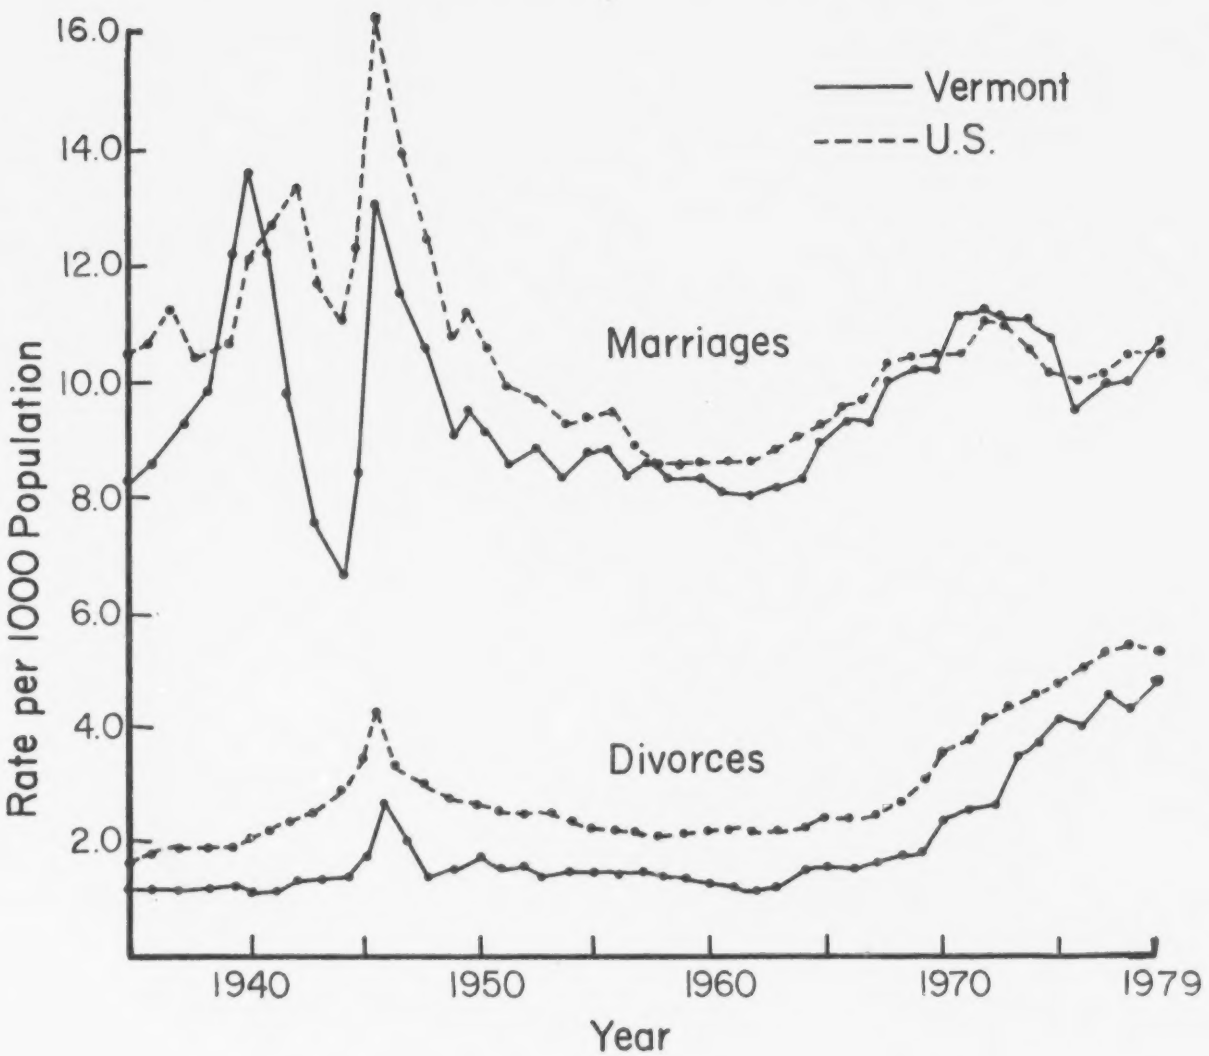
MARRIAGES AND DIVORCES

figure 10

Marriage and Divorce Rates
Vermont and U.S; 1935-1979



United States Data for 1979 is Provisional

MARRIAGES AND DIVORCES

There were 5,179 marriages in Vermont in 1979, a rate of 10.5 marriages per 1,000 population, representing a slight increase over 1978 (Figure 10). Three hundred thirty two out-of-state grooms married Vermont brides, and 108 out-of-state brides married Vermont resident grooms. In 92 percent of marriages between Vermont residents, both partners resided in the same county. Eighty-three percent of grooms completed high school and 22 percent completed four or more years of college. In contrast, 84 percent of brides completed high school and 18 percent finished four or more years of college. Brides and grooms had an equivalent amount of education in half of all marriages, and women had more years of education than men in 25 percent of marriages.

The mean age of brides married in Vermont was 26.5 years, somewhat younger than that of grooms (29.4 years). The majority of marriages (51%) took place between couples where the husband was two or more years older than the wife. Thirty-seven percent of marriages were between partners within two years of one another, and in only 12 percent of the 1979 marriages was the groom two or more years younger than the bride. Women who married younger men were notably older (33.4 years) than brides marrying the same age or older men (25.6 years). Men marrying older women were slightly younger (27.4 years) than those marrying the same age or younger women (29.7 years).

The percentage of marriages which were first marriages continued a long term decline from levels of near 85 percent in the mid 1960's (Figure 11). In 1979, 68 percent of grooms and 70 percent of brides were married for the first time.

The 2,298 divorces granted in 1979 represent the highest divorce rate ever recorded in Vermont (4.7 per 1,000 population). The wife was plaintiff in over two-thirds (67.5%) of the divorces. The mean age of men divorced in 1979 (35.4 years) was slightly greater than that of women (32.5 years). The husband was the same age or older than the wife in 93 percent of all divorces. Only 7 percent of the divorces occurred between couples in which the wife was two or more years older than the husband, whereas in 12 percent of 1979 Vermont marriages the bride was older than the groom. This difference suggests that marriages in which the wife is older than the husband are relatively stable.

The mean duration of Vermont marriages ending in divorce in 1979 was 9.7 years. Thirty six percent of divorces involved no children under 18 years, 24 percent involved one child and 25 percent involved two children. Nearly three-quarters (71%) of divorces terminated the first marriage of both husband and wife.

Seventy two percent of husbands and 75 percent of wives divorced in 1979 had completed high school; 20 percent of husbands and 14 percent of wives attended four or more years of college.

APPENDIX

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Shigellosis and amebiasis	004, 006	004, 006
Certain other intestinal infections	007, 009	008, 009
Tuberculosis	010-018	010-019
Tuberculosis of respiratory system	010-012	010-012
Other tuberculosis	013-018	013-019
Whooping cough	033	033
Streptococcal sore throat, scarlatina and erysipelas	034-035	034
Meningococcal infection	036	036
Septicemia	038	038
Acute poliomyelitis	045	040-043
Measles	055	055
Viral hepatitis	070	070
Syphilis	090-097	090-097
All other infectious and parasitic diseases	001-003, 005, 020-032, 037,039-041, 046-054, 056-066, 071-088, 098-139	Remainder of 000-136
Malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues	140-208	140-209
...of lip, oral cavity, and pharynx	140-149	140-149
... of digestive organs and peritoneum	150-159	150-159
...of respiratory and intrathoracic organs	160-165	160-163
...of breast	174-175	174
...of genital organs	179-187	180-187
...of urinary organs	188-189	188, 189
...of all other and unspecified sites	170-173, 190-199	170-173, 190-199
Leukemia	204-208	204-207
Other malignant neoplams of lymphatic and hematopoietic tissues	200-203	200-203, 208, 209
Benign neoplasms, carcinoma in situ, and neoplasms of uncertain behavior and of unspecified nature	210-239	210-239
Diabetes mellitus	250	250
Nutritional deficiencies	260-269	260-269
Anemias	280-285	280-285
Meningitis	320-322	320
Major cardiovascular diseases	390-448	390-448
Diseases of heart	390-398,402,404-429	390-398,402,404,410-429
Rheumatic fever & rheumatic heart disease	390-398	390-398
Hypertensive heart disease	402	402
Hypertensive heart and renal disease	404	404
Ischemic heart disease	410-414	410-413
Acute myocardial infarction	410	410
Other acute & subacute forms of ischemic heart disease	411	411
Angina pectoris	413	413
Old myocardial infarction & other forms of chronic ischemic heart disease	412, 414	412
Other diseases of endocardium	424	424, 428
All other forms of heart disease	415-423, 425-429	420-423, 425-427, 429

DEFINITIONS OF THE 72 SELECTED CAUSES OF DEATH

Causes of Death	Category Numbers According to the International Classification of Diseases	
	Ninth Revision	Eighth Revision Adapted
Hypertension with or without renal disease	401, 403	400, 401, 403
Cerebrovascular diseases	430-438	430-438
Intracerebral & other intracranial hemorrhage	431-432	431
Cerebral thrombosis and unspecified occlusion of cerebral arteries	434.0, 434.9	433
Cerebral embolism	434.1	434
All other and late effects of cerebrovascular disease	430, 433, 435-438	430, 432, 435-438
Atherosclerosis	440	440
Other diseases of arteries, arterioles and capillaries	441-448	441-448
Acute bronchitis and bronchiolitis	466	466
Pneumonia and influenza	480-487	470-474, 480-486
Pneumonia	480-486	480-486
Influenza	487	470-474
Chronic obstructive pulmonary diseases (C.O.P.D.) & allied conditions	490-496	490-493, 519.3
Bronchitis, chronic and unspecified	490-491	490-491
Emphysema	492	492
Asthma	493	493
Other C.O.P.D. and allied conditions	494-496	519.3
Ulcer of stomach and duodenum	531-533	531-533
Appendicitis	540-543	540-543
Hernia of abdominal cavity and intestinal obstruction without mention of hernia	550-553, 560	550-553, 560
Chronic liver disease and cirrhosis	571	571
Cholelithiasis & other disorders of gallbladder	574-575	574, 575
Nephritis, nephrotic syndrome, and nephrosis	580-589	580-584
Acute glomerulonephritis & nephrotic syndrome	580-581	580, 581
Chronic glomerulonephritis, nephritis & nephropathy, not specified as acute or chronic and renal sclerosis, unspecified	582-583, 587	582-584
Renal failure, disorders resulting from impaired renal function, & small kidney of unknown cause	584-586, 588-589	582-584
Infections of kidney	590	590
Hyperplasia of prostate	600	600
Complications of pregnancy, childbirth and the puerperium	630-676	630-678
Pregnancy with abortive outcome	630-638	640-645
Other complications	640-676	630-639, 650-678
Congenital anomalies	740-759	740-759
Certain conditions originating in perinatal period	760-779	760-769.2,769.4-772, 774-778
Birth trauma, intrauterine hypoxia, birth asphyxia, and respiratory distress syndrome	767-769	764-768, 772, 776
Other conditions	760-766, 770-779	Remainder of 760-778
Symptoms, signs and ill-defined conditions	780-799	780-796
All other diseases	Residual	Residual
Accidents and adverse effects	E800-E949	E800-E949
Motor vehicle accidents	E810-E825	E810-E823
All other accidents & adverse effects	E800-E807, E826-E949	E800-E807, E825-E949
Suicide	E950-E959	E950-E959
Homicide and legal intervention	E960-E978	E960-E978
All other external causes	E980-E999	E980-E999
